

## Practical-8

Aim Perform the following Subqueries

- With IN clause
- With EXISTS clause

Output :

OR

```
SELECT column_name(s)
FROM table_name
WHERE column_name IN (value1, value2);
WHERE column_name IN (SELECT
STATEMENT);
```

To understand the IN clause, consider the previous practical No: 07 tables such as Books and category.

- With EXIST

If a subquery returns any rows at all then EXISTS subquery is TRUE and NOT EXISTS subquery is False.

TABLE1

```
WHERE EXISTS ( SELECT * FROM table2  
WHERE table1.id= table2.id);
```

- With NOT EXIST clause

Syntax :

```
SELECT * FROM TABLENAME1  
WHERE NOT EXISTS (SELECT STATEMENT);
```
